

Since its inception in 2003 we have been working with the New and Renewable Energy Centre (NaREC), GVA Grimley, MDA Consulting, OSM HOMes, PRC Group and Cratwright Pickard Architects, bringing together a full procurement and delivery mechanism for floating and flood resistant structures and communities.

Image on the right designed by Maccreanor Lavington Architects for NGM won and architectural competition held by NGM in 2004. This type of apartment structure is built on a concrete basement and can sit on land or in water.

Above NGM is in discussion with Liverpool City Council, British Waterways and English Partnerships about a proposal to construct a mixed-use development of residential and commercial properties at Liverpool's South Docks.

NGM is involved with Master Planning new developments of residential and commercial properties within flood plains.
